

Jack Coates

Developer & cyber security student

Bradford, UK coatesjack06@gmail.com GitHub / JackCoates1 LinkedIn

TECHNICAL SKILLS

Security

Wireshark · Metasploit ·
Nmap · Kali Linux · Pen
Testing · DDoS Mitigation ·
Network Security ·
Cryptography

Development

Python · Node.js · Express ·
React · TypeScript · Bash ·
PowerShell · EJS

Infrastructure

Linux · Docker · Proxmox ·
k3s · nginx · Cloudflare ·
ArgoCD · PM2

Tools & services

Git · Stripe · Tailwind CSS ·
Vite · Brevo · Telegram API ·
SSH · Certbot

EDUCATION

Cyber security studies (in
progress)

PROFILE

I am a cyber security student based in Bradford, UK. Alongside studying I build real things — full-stack web apps, security tools, and infrastructure that actually runs in production.

I run a Proxmox homelab with a k3s cluster, keep production sites live on a VPS, and automate anything that can be automated. If something can be made more secure or more reliable, I will poke at it until it is.

PROJECT WORK

Olive Aesthetics

Booking & business operations

From a first appointment to the daily clinic digest. A booking platform with Stripe deposits, an admin PWA and Telegram automation.

[React](#) / [Express](#) / [Stripe](#)

[Visit the site ↗](#)

MaxsReviews

Commerce

A complete apparel storefront: checkout, subscriber management, email and the admin tools behind the drop.

[Node.js](#) / [Express](#) / [Stripe](#) / [Brevo](#)

Homelab Infrastructure

The system behind the experiments

Mini PCs, Raspberry Pis, Proxmox and a public VPS. A working environment for running services, testing ideas and understanding the traffic at the edge.

[Proxmox](#) / [Linux](#) / [CrowdSec](#) / [OPNsense](#)

AI DDoS Firewall

Educational security prototype

An educational Python DDoS-detection scaffold with configurable firewall responses and a Flask dashboard. The machine-learning model and some integrations are prototypes, not production mitigation.

[Python](#) / [Flask](#) / [Networking](#)

Insecurity Multi-Tool

Reconnaissance tooling

A private toolkit for port scanning, subdomain enumeration and service fingerprinting. The public product page is linked below.

Python / Recon / Pen testing

This Portfolio

Personal portfolio / production

A portfolio built around a real-data network observatory, with server-security insights and verifiable build provenance.

React / TypeScript / Vite / Three.js
